

Please refer to the attached sheet showing a mark-up version of the amendments to the claims.

Claims 1-39 were previously cancelled without prejudice or disclaimer.

✓ **Claim 40 is hereby cancelled without prejudice or disclaimer.**

41. (Previously Twice Amended) A fishing apparatus for releasable engagement with and disengagement from a fishing device comprising:

a fishing line having a first end with a sliding loop formed on the first end of the fishing line;

the sliding loop having a diameter which may be decreased and increased to respectively engage and disengage the fishing line and the fishing device;

the sliding loop formed by a sliding loop knot defined in part by a first loop and a second loop;

the second loop formed adjacent to the first loop and adjacent to a central portion of the fishing line;

a free end of the fishing line wrapped around the central portion and through the first loop and the second loop multiple times;

the free end of the fishing line drawn away from the first loop and the second loop to form the sliding loop knot by drawing the first loop and the second loop together with each other and the central portion of the fishing line; and

the sliding loop knot operable to slide along the central portion of the fishing line to increase and decrease the diameter of the sliding loop.

42. (Amended) A fishing apparatus including a fishing device defined in part by a shank with a hook disposed at a first end of the shank and an eye disposed at a second end of the shank, the fishing apparatus comprising:

a fishing line having a first end with a sliding loop formed on the first end of the fishing line by a sliding loop knot;

the eye having a distal end disposed adjacent to and permanently spaced from the shank to accommodate engagement and disengagement of the sliding loop with the eye;

the sliding loop knot operable to releasably engage and disengage the fishing line with the eye of the fishing device;

a blocker formed on the eye as an integral part thereof to prevent the sliding loop from sliding off of the eye;

the sliding loop having a diameter which may be decreased by movement of the sliding loop knot to releasably engage the fishing line with the eye by clinching the sliding loop against the eye and which may be increased by movement of the sliding loop knot to allow movement of the sliding loop over the blocker and disengagement of the sliding loop from the eye;

the sliding loop knot defined in part by a first loop and a second loop disposed adjacent to each other and adjacent to a central portion of the fishing line;

a free end of the fishing line wrapped multiple times around the central portion and through the first loop and the second loop and drawn away from the first loop and the second loop to form the sliding loop knot on the first end of the fishing line; and

the sliding loop knot operable for movement along the central portion of the fishing line to allow engaging and disengaging the sliding loop knot with the eye of the fishing device.

43. The fishing apparatus of Claim 42 wherein the fishing line further comprises:
a first section having a first end and a second end;
a second section having a first end and a second end;
the sliding loop formed on the first end of the first section; and
the second end of the first section releasably engaged with the first end of the second section.

44. The fishing apparatus of Claim 43 further comprising:
a first fixed loop formed on the second end of the first section;
a second fixed loop formed on the first end of the second section; and
the first fixed loop and the second fixed loop releasably engaged with each other.

Claim 45 is hereby cancelled without prejudice or disclaimer.
